

Arnold NextG implements Safety-by-Wire® technology. We offer the globally unique and multi-redundant central control unit NX NextMotion, which enables a fail-safe and individual implementation of all Drive-by-Wire requirements. As an independent pre-developer, Arnold NextG takes care of planning and implementation - from the vision to road approval.

## We are looking for

# Technical Project Manager for Special Vehicles (m/f/d)

## Your tasks

<i>Organisation</i>	<ul style="list-style-type: none"><li>• You act as a link between sales, development, and production.</li><li>• You are capable of conveying technical concepts and projects to a diverse audience.</li><li>• You coordinate the needs of the development and production teams, thereby ensuring a harmonious and productive workflow.</li></ul>
<i>Realisation</i>	<ul style="list-style-type: none"><li>• You understand the architecture as well as the hardware and software of complex vehicle systems and are able to interpret them.</li><li>• You lead and monitor the construction of special vehicles – from conception to completion.</li><li>• You always keep an eye on costs, quality, and schedules.</li><li>• You ensure the seamless implementation of industry-standard software and hardware tools in our workshop environment</li><li>• You monitor the implementation of international projects on site</li></ul>

## Your profile

Apart from a degree in a relevant field, do you have proven experience in building and managing complex special vehicle projects, and are you a structured team player with strong analytical skills? Is thinking "outside the box" a standard practice for you? Do you have a comprehensive understanding of vehicle systems, their architecture, and the interplay between hardware and software? Can international customers and employees rely on your excellent English language skills? Do you think like an entrepreneur and have the courage to make decisions, and have you already demonstrated that you can lead teams of specialists? If so, we urgently need to talk!

## We offer

Working with our team of world-class developers and talented newcomers, you have the unique opportunity to actively shape the future of mobility today. Our fail-safe electronic steering and braking system with active feedback (Force Feedback), which is already successfully used in mobility for the disabled on the road, eliminates the need for a steering column and represents the biggest revolution in 136 years of the vehicle industry. Our globally unique technology not only makes it possible to rethink and redesign vehicle interiors and concepts from the ground up digitally, but it also offers the possibility to control any vehicle from any location in the world or to freely choose the steering angle and steering force – even as a retrofit solution (logistics yards, ports, etc.). We use motorsport with our own team as a development environment, laying the foundation for the safe autonomous driving of the future. State-of-the-art workplaces, our own mobility campus with training rooms and a driving safety center, short decision-making paths, and a high project dynamic ensure a varied yet goal-oriented environment. With us, you will find a package of flexible working hours, contemporary leadership structures, attractive remuneration, and attractive in-house employee offers (gym, health budget, Skill-Court, five training, shock wave, ultrasound, electric and laser therapy). Our physiotherapy and podiatry services complete the package.
